PROFILE

Unity gameplay programmer with 3+ years of experience specializing in multiplayer systems and scalable gameplay architecture. Proven track record leading gameplay programming teams, architecting data-driven and event-driven systems, and shipping production-grade multiplayer features, from networked combat and economy systems to full VR gameplay modules.

WORK EXPERIENCE

Mid-Level Unity Game Developer, RAR-IT 08/2025 – Present | Remote

Designing and implementing scalable gameplay systems for an unannounced multiplayer third-person shooter in Unity, collaborating with an 11-person team of programmers, designers, and artists to deliver high-performance multiplayer features.

- Designed a reusable UI MVP framework that cut screen-building time for programmers and designers by 70%, streamlining navigation, transitions, and data binding.
- Adapted single-player mechanics for multiplayer use with proper networking, server authority, and state synchronization.
- Built a complete multiplayer wave-based tower defense game mode spanning 6 enemy types across 15 progressive waves, including spawning, progression, and reward systems.
- Implemented multiplayer inventory, item pickup, and character customization systems.
- Created and integrated new gameplay mechanics, including helicopters and other interactive features.
- Optimized multiplayer gameplay systems for maintainability, performance, and network reliability.

Lead Gameplay Programmer, Alharbi Studio 2024 – 03/2026 | Remote

- Led a 6-person gameplay programming team, designing and implementing core gameplay systems while collaborating with designers, artists, and engineers to deliver high-quality features.
- Architected scalable, maintainable gameplay systems and upheld high code quality through code reviews and mentoring.
- Developed an in-game reporting system processing over 10,000 traffic violation reports daily across a 60,000-user base, routed to a web-based admin dashboard for moderation.
- Integrated secure web-based purchases, allowing players to buy in-game items via Player ID and receive them instantly in-game, cutting app store commission costs by 30%.
- Collaborated with backend developers to integrate APIs for player accounts, purchases, and game services.
- Optimized gameplay systems, resolved technical issues, and ensured features aligned with project vision.

Gameplay Programmer, Alharbi Studio 2023 – 2024 | Remote

- Worked remotely with Alharbi Studio during the early stages of a Saudi policeman simulation game, contributing core gameplay programming.

EDUCATION

Bachelor of Computer Science, Mansoura University 2022 – 2026 | Mansoura

FEATURED PROJECTS

HireQuest — VR Interview Simulation Platform, (Graduation Project)

- Built the Unity/VR module of a multi-team platform simulating job interviews on Meta Quest 3S, integrating a fine-tuned DeepSeek R1 model for interview response evaluation.
- Implemented XR Origin hand tracking, world-space UI, and custom keyboard/follow-UI systems for a fully in-headset experience.
- Developed a companion mobile app pairing flow (OTP-based) alongside leaderboard and TTS/STT features.

Radiant Undead Framework (RUF) — Action RPG Framework, (Personal Project)

- Architected a modular, layered state machine system separating high-level character states from low-level animation and combat states, enabling scalable and independently testable gameplay logic.
- Structured the framework into distinct data, intent, context, and engine layers, keeping gameplay logic cleanly decoupled from Unity-specific implementation.
- Designed a modular enemy AI framework using blackboard-driven decision-making, faction-based evaluation, and priority-based combat coordination for multi-enemy encounters.
- Built fully data-driven inventory, equipment, and character progression systems, unifying stats, gear, and abilities into a single pipeline authored entirely through data assets.
- Implemented a custom IK system and a combat HUD using MVP architecture with ScriptableObject-based event channels, supporting responsive movement and decoupled UI.

SKILLS

- **Engine & Languages:** C#, OOP, SOLID, Unity
- **Multiplayer Networking:** FishNet, Fusion, Photon PUN2
- **Architecture:** Data-Driven, Event-Driven, MVP, MVVM, Clean Architecture
- **Backend Integration:** Firebase, PlayFab, REST APIs, WebSockets
- **XR Development:** VR/XR Development, Meta Quest, XR Interaction Toolkit
- **Other:** Git, Performance Optimization & Debugging, Plastic SCM

VOLUNTEERING EXPERIENCE

Game Development Mentor

2023 – 2025

- Mentored new students in the Game Development Circle, introducing technical and non-technical game development skills.

Logistics Member

2022 – 2023

- Contributed to team logistics and event planning, developing teamwork, communication, and critical thinking skills.
